

My name is Dongchul Bae. It is my privilege to be able to share my thought about “Making Disciples in Business Contexts” in this Tokyo 2010 – Global Mission Consultation and Celebration.

I am not a pastor. I am rather a business person and my target is in business area mainly. I want to share about an intelligent evangelistic system which we are developing and experiencing now. It is a project of love and hope. I don't think it is easy to grasp the whole picture of the system in such a short time. But I hope to contribute to your ministries and missions in some ways.

I meet many Christians and non-Christians daily in business scenes. The business is the first priority for most of them. And they have concerns and troubles to solve in their lives. They don't know the truth that God created us and He wants us to rejoice in Him. They don't have confidence and are lost in their ways. They don't know their identity. It is painful for me to see their situation like this. Their future is not bright and they are discouraged in front of many obstacles in life.

These facts led me to think that we needed to make a system and manual based on the Biblical principles in which people's lives are built up. Let's see those biblical principles briefly.

The first step is “Calling” .

God called Abraham first. We can read Genesis chapter 12 and see how God directly called Abraham. God called Abraham out of the land of Ur to make him a child of God and build him up as a man of God.

The second step is “Vision” .

God let Abraham see the vision (the plan of God or the will of God). Before God starts training Abraham, He gave him the vision.

The third step is “Training” .

God gives us visions and then He trains us.

The fourth step is “Rediscovering the vision” .

In this step, we recognize the vision again. Our humanistic ideas or desires are taken away in the process of God's training and we rediscover the pure vision from God.

The last step is "Reproducing the vision" .

In other words, our vision comes true in this step. For the people of God who are committed to God's vision totally, each thought or action is given to accomplish the visions from God.

I believe that it could be the most effective way if we can lead the people in this process so that they can realize and reproduce the vision. Then they would experience the encounter with God naturally and be prepared to be able to convey the love of God.

As we live as Christians, we experience evangelism, education and missions. We come to think about ways they can experience the presence of God in their daily lives. We need to tell them that they can experience the blessings of God through calling, visions, training, rediscovering the visions and reproducing them.

We need to lead many souls who are in this world to trust in God of light. By this intelligent system, "the project of hope and love" , we can help them to understand their culture in a new way, to understand their problems and to see the living God who wants to meet their needs.

In my opinion, it is important to make a system in which a person can come to seek God by himself. By giving them new understandings about their problems, they can cope with their children, work places, financial problems and their future.

If we can restore people's lives by using this kind of intelligent system, many people could know God naturally and it could be one of the most effective evangelistic ways.

So I'd like to introduce the contents of the intelligent system, consisting of 20 parts.
